

# Yulia Ivashchenko

---

## SUMMARY

I worked as an economist for a long time. But over the past few years, I realized that I was not developing in my profession and decided to study as a programmer. The profession of a front-end developer seemed quite interesting to me.

I successfully completed the frontend development course and the course to learn Angular at [RS School](#).

Extensive practice during training allowed me to gain experience in developing both landing pages and experience in team work in developing SPA using technologies such as TS, React, Angular.
